

IGI ParCAM Family

CAD/CAM Software

Your CAD/CAM Needs are Specialized – your software should be

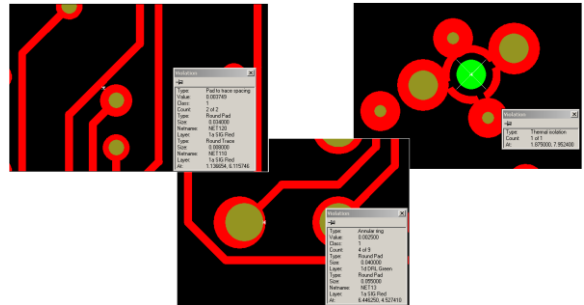

too. ParCAM offers a highly flexible suite of tools for Windows 7, 8 and 10. Whether your needs include translation/viewing, data optimization, netlist extraction and compare, DFM analysis and editing, panelizing or output, ParCAM can be configured for your work.

Read it... Easily

Drag and drop input. A wide variety of inputs are supported, including RS-274X, RS-274D, Drill, ODB++, DPF, and DXF. Read-in options, optimizations, and DFM processes are adjusted quickly.

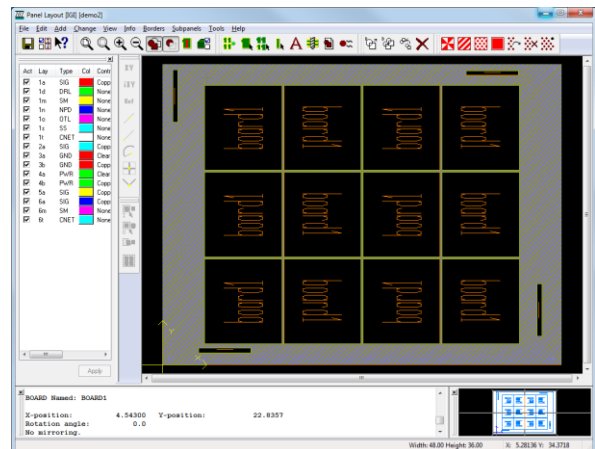

Analyze it and Fix it... Quickly

Your job must be ready for manufacture. Check DRC and analyze DFM, Classifying those results by criteria you establish. Only run the checks you need. Extract and compare netlists. Graphically view defects or other areas of concern. ICE fixes conflicts automatically. For manual editing tasks, a full range of edits are at your finger tips, making changes easy. Interrogate data as needed, measuring, counting, and reporting. Find smallest features and calculate areas.

Build it... Right

Step and repeat boards and build panels with coupons, venting, tooling holes. Flexible coupon generation with improved analysis and settings wizards enable you to create coupons using job data and any number of sections, in any order. Panel templates make rebuilding consistent. Apply etch compensations at output, without affecting the original data.

Ship it... Now!

Output to standard formats such as RS-274X & D (Gerber), ODB++, Drill, Netlist (MicroCraft, ATG, ECT) and many others.
