

## IGI Announces Fireplot 2.00 for Windows 7

Infinite Graphics Incorporated is pleased to announce the release of Fireplot 2.00 for Windows 7. Fireplot is a PC based replacement for the aging and impossible to support SunSparc Unix based platform.

Why do this?

- ✦ The Sun Sparc is no longer supported and critical parts can no longer be found.
- ✦ Hardware related failure on mission critical systems can cause unexpected down time.
- ✦ Fireplot is PC based and runs on current Windows 7 OS platform.
- ✦ Pre-configuration ensures effortless replacement.
- ✦ Fireplot eliminates polygon processing problems including errors and data that causes the plotter to slow down.
- ✦ Fireplot ensures that your current MDA/CSI Plotter ALWAYS plots at full speed.
- ✦ Improved, integrated error correction management.
- ✦ WYSIWYG film viewing. See what the data looks like right within Fireplot.
- ✦ Fireplot accepts more than just MDA data! Most customers immediately switch to RS274X.

This replacement program solves these issues by providing a currently supported OS platform running on currently supported hardware. The upgrade includes the following:

### Windows 7 Fireplot Rip Computer

- ✦ Current i7 Dell Hardware with 3 year warranty
- ✦ RAID 1 protects against catastrophic hard drive failure utilizing mirrored drives
- ✦ Fireplot 2.0 for Windows 7 Replaces SunSparc
- ✦ 21.5" LCD Widescreen Display
- ✦ USB dongle license
- ✦ Pre-configured replacement.

### Plotbox Computer

- ✦ PC Host of the PCI Decompression Card that replaces the antiquated PIPV (Polygon Image Processor)
- ✦ Solid state boot drive, integrated network card support
- ✦ CD/DVD recovery support
- ✦ Pre-configured for slip-stream replacement.

### Installation/Recovery Media and Documentation

- ✦ CD based EZ disk image recovery.
